8. DESCRIPTION AND CHARACTERISTICS OF AREA:

Terrain: Level with no construction hazards or flood threats. Land improved 15%. Deed restrictions exist, but terms are not known. Conveniences are not readily available. Many streets unimproved. This is a recent subdivision and has had a rapid development under stimulus of high pressure promotion, speculative building and FHA financing. Construction is low grade standard. Architectural designs are attractive. Some homesites are oversize permitting sustenance homesteads. Indications are that speculative building has outrun demand and that activity will diminish. It is thought that in some cases four-room structures are being advertised as five rooms. There is a question as to the need for this subdivision and whether the location is a good one. As pattern of area is not established it is only thought possible to accord a provisional hatched "low blue" grade.
