#### 8. DESCRIPTION AND CHARACTERISTICS OF AREA:

Level terrain except in northeast where it is sloping to hillside. 50% developed. No construction hazards except flood washes at western and eastern sides of area. This is a typical small town area comprising dwellings of every age, type and description. In order to properly break area up into homogeneous areas, it would require innumerable small areas. Maintenance in area as a whole is just fair. New construction is scattered throughout area without regard for neighborhood desirability. There are innumerable dead-end streets occasioned by lack of railroad over or under passes. Although the western half of the area is separated from the eastern half by the business district, it bears the same general characteristics and is subject to the same influences. All conveniences are adjacent to most of area. Small section in northeast along Valle Vista and Norumbega is below the area average. A number of sanitoriums and "rest homes" are located in the foothills in northeast part of area, but is too small to grade separately. The section south of Whittocks and east of Shamrock is far above the area average but is also too small to grade separately - most of new construction is concentrated here.
