8. DESCRIPTION AND CHARACTERISTICS OF AREA:
   Terrain: Level to rolling with slope from northeast to southwest. Heavy adobe soil causes slight construction hazard. Land improved 85%. Deed restrictions have quite generally expired. Zoning is mixed, but is quite generally multi-family. Area, however, is 95% single-family development. Conveniences are all readily available. Public improvements are of good quality. This is an old residential district and, while heterogeneous in its improvements, is still highly regarded. The eastern section is older, most of the new dwellings being in the western part. Construction of both old and new improvements is of standard quality, and maintenance is generally of acceptable character, although somewhat spotted. Population is homogeneous. A number of the large old residences have been converted into student boarding houses. Broad shaded streets add charm to the area. This area has been declining for a number of years but, owing to its stability, it will be many years before it becomes blighted. It is, therefore, accorded a "modest yellow" grade.
