This digest reveals a high ratio of foreign-born and colored population, but as has been indicated, San Francisco's early growth was highly cosmopolitan in character, and this characteristic of world-citizenship obtains today and has resulted in a very much higher than average degree of tolerance. This is true to such a degree that racial elements in a district or section are not considered necessarily inharmonious unless they are of the colored races. Of these there are 39,426 or 6.2% of the city's population, as follows:

- Negroes............. 3,803
- Chinese............. 16,303
- Japanese............ 6,250
- Mexicans............ 7,922
- Other Races........ 5,147

City authorities, in cooperation with the various community and civic organizations, have for many years past stringently sought to confine those inharmonious colored elements to certain districts. As a result of these efforts, the Negro population of San Francisco is largely confined to area "D-1" on the Security Area Map.

The Chinese concentration is in an ungraded area lying roughly south and west of "C-11" and south and east of "D-5", this area being known as "Chinatown".

Area "D-3" is quite largely given over to the Japanese and Mexican hybrids and others of the colored races. This is particularly true of the north-central portion of this area.

Some of the highest class apartment districts of the city are immediately adjacent to these concentrations of colored inhabitants, but the situation is so well under control that a threat of infiltration is not considered to be serious.

With a desire to clarify the racial distribution throughout the city, there has been set up on Appendix Pages, 7-A, 8-A, and 9-A a schedule showing the racial characteristics of 19 districts in the city, which was constructed by
