These figures apply only to the population within the city limits.
Owing to the high differential between inside and outside taxes, which are discussed on page 15 there has in the past few years been a decided trend of population to those areas outside the city limits. After having surveyed these outside areas, it is estimated that they contain a population of from 8 to 10 thousand people. These outside areas are - B-1, B-5, B-9, B-10, B-13, - C-1, C-2, C-4, C-6, C-7, C-12, C-13, D-1, C-2, D-4, D-6 and parts of C-5, C-11, C-14 and D-10.

While it is believed that all of the areas within the city limits have had population increases, the most pronounced growth has been in the northern and northwestern areas including A-2, A-3, B-2, B-4, and B-8. While there have been no annexations which added to the population of the city since 1930, there have been a number of additions since the original plat was filed in 1849; the principal of these were made as follows: 1870 - 1914 - 1920 - 1924- and 1925. The city was expanded to include park and industrial areas in both 1931 and 1934.

On appendix page 6A, will be found the racial distribution, as shown by the census of 1930. A study of these 1930 census figures indicates that as a whole the city's population is a homogeneous one. In 1930 there were only 433 negroes in the city and the other colored races numbered but 4800. Generally speaking these and other than white racial elements are very generally confined to the "red areas" shown upon the Security Area Map and to the commercial and industrial areas which surround them. The danger of infiltration of these racial elements is, therefore, minimized.

D. Labor and Employment

1. General Labor Conditions.

Stockton is not nearly so highly unionized as the "Bay" cities. Attempts have been made during the past several years to organize farm laborers and employees of packing and canning concerns. The situation became quite acute in 1937, but seems to have lost momentum during the current year. As has been indicated this freedom from labor domination emured greatly to the advantage of Stockton during the recent labor disturbances in San Francisco and Oakland.

2. Building crafts:

While labor employed on public, commercial and industrial construction are very largely members of organized labor, informed opinion is that not to exceed 50%
